Topologia

Notas sobre o trabalho

- Mascaras de Rede e Sub-rede
 - Foi utilizada uma Máscara 255.255.255.248 (/29) para as sub-redes do IPv4 uma vez que esta máscara nem tem muito nem tem poucos endereços disponíveis comparado com o /30 e o /28
 - Para os routers foi utilizada a rede 10.1.1.0/23 tendo as sub-redes uma máscara /30 uma vez que era mais que suficiente dois ips úteis para a ligação
- Madrid
- o IPv4
- OSPF
- Barcelona
- o IPv4

- EIGRP
- 5 routers não tendo cada router mais que 3 terminais para que cada router possa ter pelo menos um terminal

Sevilha

- o IPv4
- o RIP
- 5 routers não tendo cada router mais que 3 terminais para que cada router possa ter pelo menos um terminal

La Corunha

- o IPv4
- RIP (uma vez que Sevilha utilizava RIP)
- 5 routers não tendo cada router mais que 3 terminais para que cada router possa ter pelo menos um terminal

Badajoz

- o IPv4
- o RIP (uma vez que Sevilha utilizava RIP)
- 5 routers não tendo cada router mais que 3 terminais para que cada router possa ter pelo menos um terminal

Bilbao

- o IPv6
- EIGRP (uma vez que Barcelona utilizava EIGRP)
- 5 routers não tendo cada router mais que 3 terminais para que cada router possa ter pelo menos um terminal

Visualmente

- A localização e o protocolo utilizado encontramse num dos cantos de cada quadrado que delimita a área da rede
- Os endereços dos terminais não se encontram escritos na topologia para não ficar muito confuso e por isso apenas escrevi os endereços utilizados entre ligações entre routers

 As áreas do OSPF encontram se delimitadas com círculos de cor indicado dentro do mesmo algumas informações (exemplo: número da área OSPF).
